

FDA Drug Approvals

Each month the FDA approves new medications, and below is a highlight of the most relevant new approvals and/or drugs which have the potential to impact your prescription plan. While the medications below have been evaluated and approved by the FDA, they may not enter the marketplace for several weeks or months. Therefore, pricing information for these medications is typically unavailable at the time of approval.

New Brand Approvals			
Drug Name	Uses/Treatment	Pricing Information	Additional Information
Sernivo™ (betamethasone dipropionate topical spray)	Treatment of mild to moderate plaque psoriasis	Pricing information not yet available	<ul style="list-style-type: none"> • Drug Information: Topical (applied to skin) formulation of betamethasone, a highly potent corticosteroid. Sernivo is not indicated for long-term use. • Formulary Management: Considered non-preferred upon market entry. • Control Trak: Subject to max dollar and max dose edits.
